

Integers

Review

$$-4 \cdot 3 = -12$$

$$-12 \div -4 = +3$$

$$-6 + -3 = -9$$

$$-6 - +3 = -9$$

$$-4 - (-5) = +1$$

$$-3 \cdot (-2) = +6$$

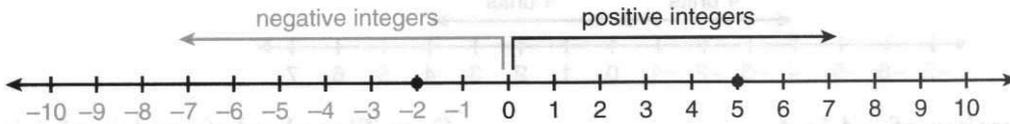

ALGEBRA READINESS

NAME _____

Integers

Negative and positive whole numbers are called **integers**.

Integers are often shown on a number line with zero as a starting point.

The greater of two integers is always the one farther to the right on a number line.

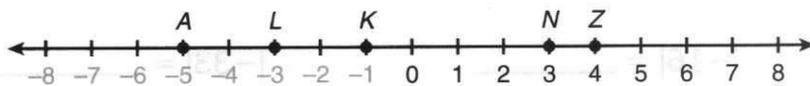

Say: -2 is less than 5 .

Write: $-2 < 5$

Say: 5 is greater than -2 .

Write: $5 > -2$

Use integers to name each point on a number line.

1. N _____ L _____ Z _____ K _____ A _____

Graph each point on the number line below.

2. $B, -7$ $F, 1$ $M, 4$ $P, -4$ $S, 5$

Write $<$ or $>$ in each .

- | | | | |
|---------------------------------------|-----------------------------------|-----------------------------------|------------------------------------|
| a | b | c | d |
| 3. -1 <input type="checkbox"/> -3 | 4 <input type="checkbox"/> 2 | 0 <input type="checkbox"/> 5 | 0 <input type="checkbox"/> -1 |
| 4. -4 <input type="checkbox"/> -2 | -8 <input type="checkbox"/> 0 | 4 <input type="checkbox"/> -4 | -1 <input type="checkbox"/> -7 |
| 5. -6 <input type="checkbox"/> 1 | 2 <input type="checkbox"/> -6 | -5 <input type="checkbox"/> 0 | -7 <input type="checkbox"/> -8 |

List each set of integers in order from least to greatest.

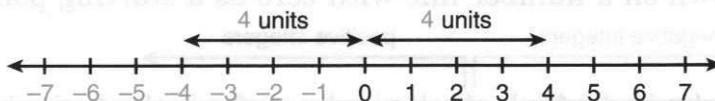

- | | |

Absolute Value

NAME _____

The **absolute value** of a number is the distance that number is from zero on the number line. The absolute value of a number is always positive.

Say: The absolute value of -4 is 4 .

Write: $|-4| = 4$

Say: The absolute value of 4 is 4 .

Write: $|4| = 4$

Write the absolute value of each number.

Adding and Subtracting Integers

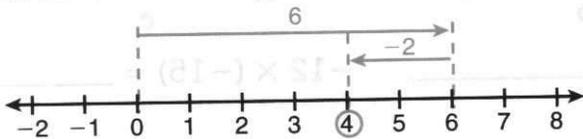

The sum of two positive integers is a **positive** integer. $3 + 2 = 5$

The sum of two negative integers is a **negative** integer. $-4 + (-2) = -6$

To add integers with different signs, **subtract** their absolute values. Give the result the same sign as the integer with the greatest absolute value. $6 + (-2) = 4$

To subtract an integer, **add** its opposite.
The subtraction problem $-8 - 3 = -11$ can be rewritten as the addition problem $-8 + (-3) = -11$. -3 is the opposite of 3.

Add.

NAME _____

Multiplying and Dividing Integers

The product of two integers with **like** signs is **positive**.

$$3 \times 5 = 15 \qquad -3 \times (-5) = 15$$

The product of two integers with **unlike** signs is **negative**.

$$-6 \times 3 = -18 \qquad 6 \times (-3) = -18$$

The quotient of two integers with **like** signs is **positive**.

$$8 \div 4 = 2 \qquad -8 \div (-4) = 2$$

The quotient of two integers with **unlike** signs is **negative**.

$$6 \div (-3) = -2 \qquad -6 \div 3 = -2$$

State whether each answer is positive or negative.
